

ABSTRACT OF THE DISCLOSURE

A garment drying rack having a hub and at least three elongated legs pivotally mounted at their inner end to the hub. The legs are movable between an operable position in which the legs extend radially outwardly from the hub and a storage position in which the legs are generally parallel to and adjacent each other. An actuator having a gear rack on its outer surface is movably positioned within the hub between a first and a second position. The gear rack on the actuator cooperates with a ratchet formed at the inner end of each leg so that movement of the actuator from its first and to its second position simultaneously pivots the legs from the storage position and to their operable position in unison with each other.
